

AI BASED MOBILE ASSISTANT FOR FLU

Yusuf Yesil, M.D.

Yesil Science

PROBLEM

Influenza patients has:

- -Unconscious antibiotic use
 - Increased antibiotic resistance
 - · Antibiotic-associated diarrhea (probiotics)
- -Unnecessary hospital admissions
 - Disruptions in health care
 - Disruptions in triage
 - Financial losses

SOLU TION

What is pharyngitis?

Pharyngitis is inflammation of the pharynx, which is in the back of the throat. It's most often referred to simply as "sore throat." Pharyngitis can also cause scratchiness in the throat and difficulty swallowing.

According to the American Osteopathic Association (AOA), pharyngitis-induced sore throat is one of the most common reasons for doctor visits. More cases of pharyngitis occur during the colder months of the year. It's also one of the most common reasons why people stay home from work. In order to properly treat a sore throat, it's important to identify its cause. Pharyngitis may be caused by bacterial or viral infections.

Causes of pharyngitis

There are numerous viral and bacterial agents that can cause pharyngitis. They include:

- measles
- · adenovirus, which is one of the causes of the common cold
- chickenpox
- croup, which is a childhood illness distinguished by a barking cough
- whooping cough
- group A streptococcus

Viruses are the most common cause of sore throats. Pharyngitis is most commonly caused by viral infections such as the common cold, influenza, or mononucleosis. Viral infections don't respond to antibiotics, and treatment is only necessary to help relieve symptoms.

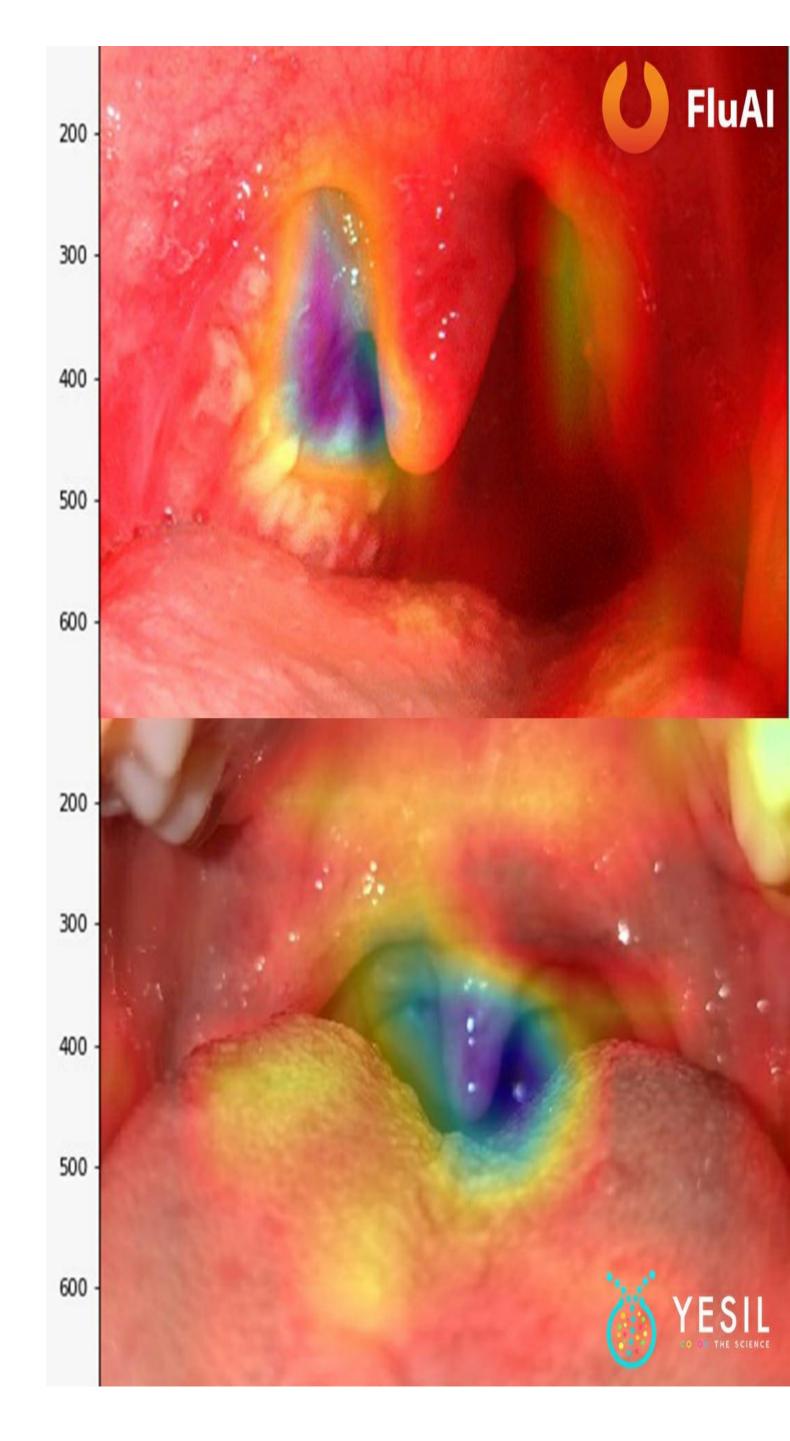

Classic

FluAl

SOLUTION

Al Based mobile personal flu assistant offering personalized diagnostic treatment recommendations based on throat appearance and symptoms of patients with flu.

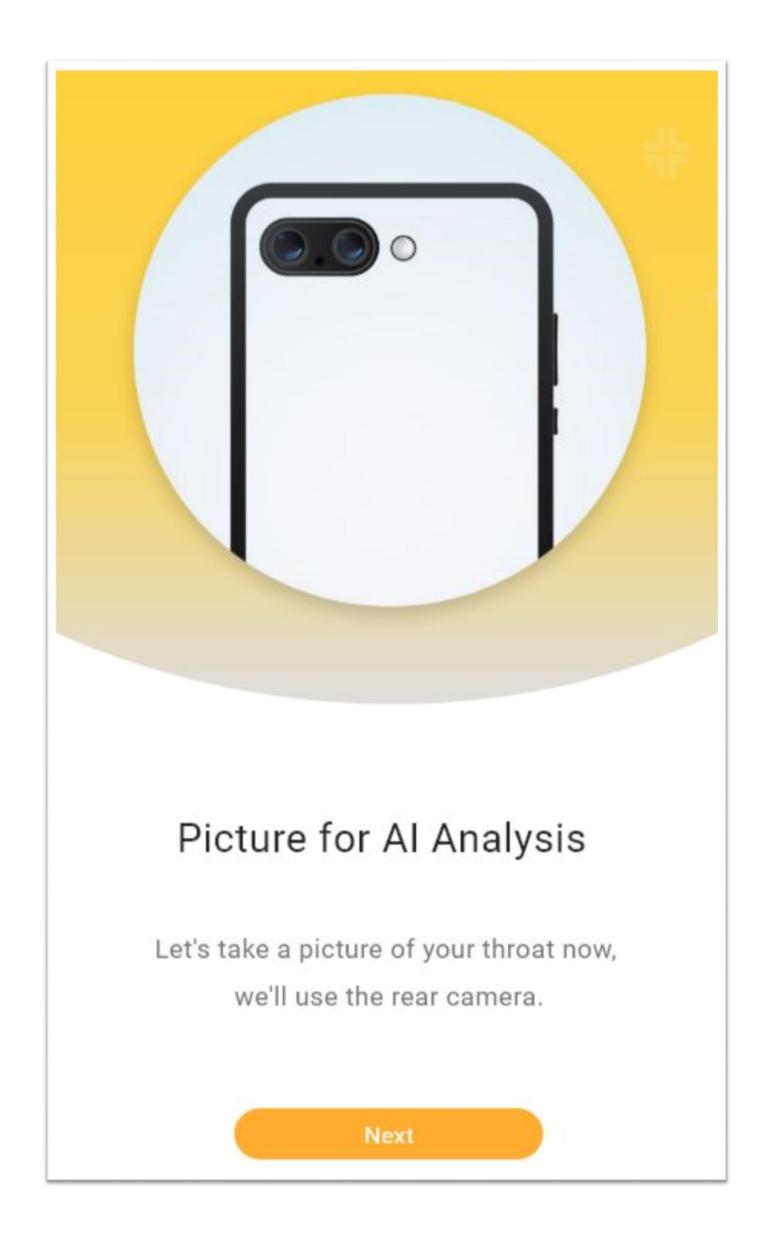

VALUE PROPOSITION

Technologycal Scope

Deep Learning based Complex algoryhtms for image and symptom analysis

Value Proposition

Al based personal suggestions
Precision diagnose and treatment suggestions
Fast and easy to use
Accesible

MARKET

Customer Segment : Users of smartphone that are suffered from flu symptoms (+5 years)

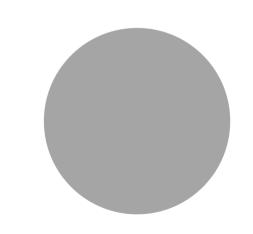

Market Size : 6-7 million people suffered influenza at US 2018-2019

Every year across the globe, there are an estimated 1 billion cases, of which 3 to 5 million are severe cases, resulting in 290 000 to 650 000 influenza-related respiratory deaths.*

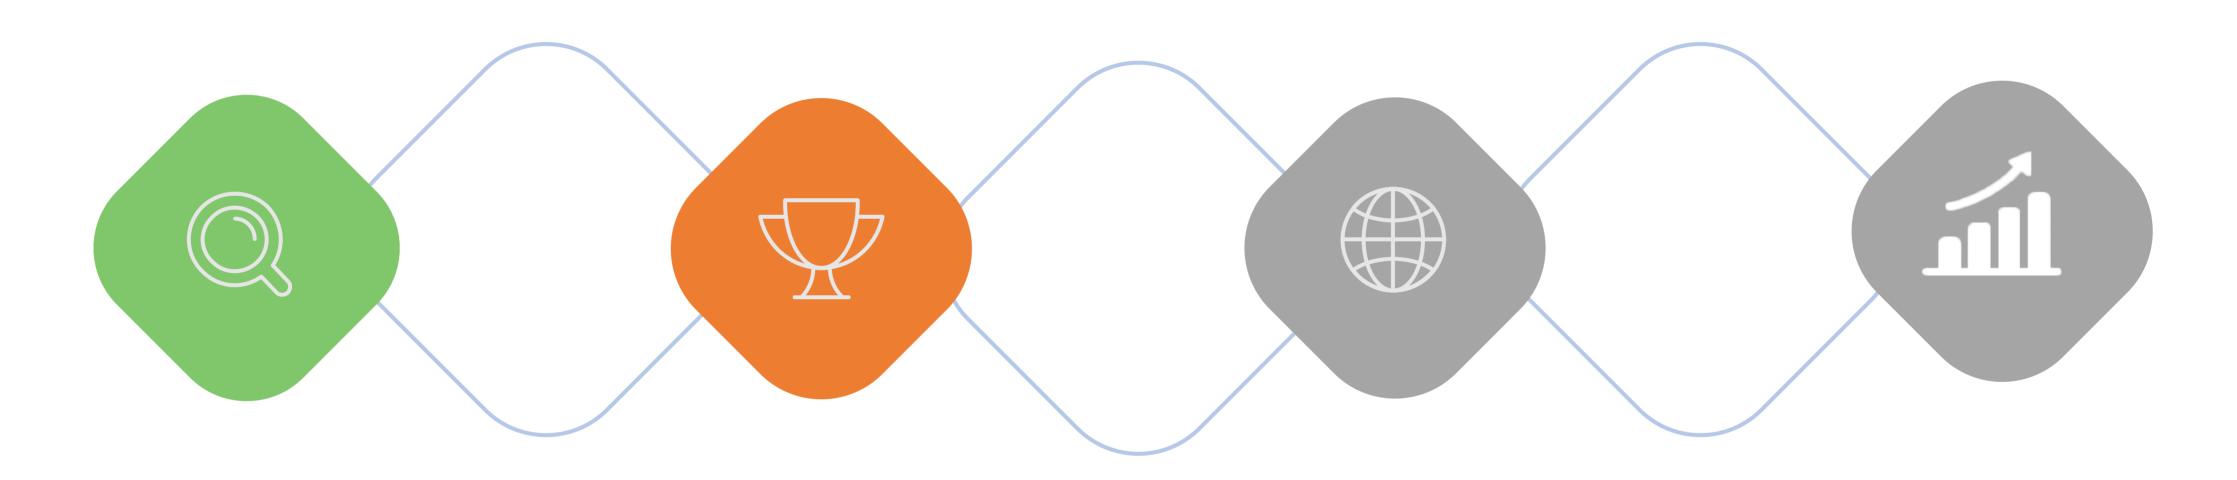

6-7 M people in US
